

SECURE SYSTEMS & NETWORK DESIGN

Spectra has extensive experience in delivering and supporting complex Information Systems in both static and deployed environments. As a dynamic, agile, security accredited organisation, Spectra can leverage this experience to deliver Cyber Advisory and secure Hosted and Managed Solutions, ensuring compliance with cyber security standards and best practices.

EXPERIENCED

Poorly designed networks can be inflexible, cumbersome and difficult to manage. They are unable to keep up with fast-changing operational requirements and, even worse, become an obstacle that can compromise results. Spectra's Agile Network Architecture compartmentalises the network to deliver levels of access and security appropriate to each application and environment.

AGILE

The combination of experience, agility, dynamism and deep understanding of defence requirements results in a unique track record of successfully delivering secure, robust and deployable networks on time, to specification and on budget.

DYNAMIC

SHADE: CYBER NETWORK SERVICES

Designed to provide voice and data services for small to medium teams operating in remote or hostile areas. It uses any bearer, including 3G/4G, ADSL and/or VSAT, is remotely re-configurable and has 24/7/365 NOC support.

HOSTED & MANAGED SERVICES

Delivering Mission Critical Communications is Spectra's business, and our comprehensive services can provide a full solution for Defence demands.

MISSION CRITICAL

Spectra can provide a fully managed service, removing the difficulties and overheads resulting from building and maintaining your own network. Gain greater control, optimise your network environment and free-up resources to focus on your main activities.

FULLY MANAGED

Our secure facility is fully accredited and staffed by defence-experienced engineers. A 24/7/365 Network Operations Centre, with diverse routing and backup power, maintains the security, continuity and availability of your networks and communications.

NETWORK OPERATIONS

Through vulnerability assessments, Spectra can provide mitigation solutions across cyber strategy & policy development, risk analysis and management and Business Continuity & Disaster Recovery planning for security governance and regulatory compliance

CYBER ADVISORY

μSHADE

μSHADE Provides secure voice and data services for small teams operating in remote or hostile areas away from base. It uses any available bearer, is remotely re-configurable and has 24/7/365 support.
